Clone from S. Wiemann, Molecular Genome Analysis, German Cancer Clone from S. Wiemann, Molecular Genome Analysis, German Cancer Research Center (DKPZ), Email s.wlemann@dkfz-heidelberg.de; sequenced by DKPZ (German Cancer Research Center, Heidelberg/Germany) within the cDNA sequencing consortium of the German Genome Project. This clone (DKFZ)434N0935) is available at the RZPD Deutsches Ressourcenzentrum fuer Genomforschung GmbH in Berlin, Germany. Please contact RZPD for ordering: http://www.rzpd.de/cgi-bin/products/cl.cgi*CloneID=DKFZp434N0935 Further information about the clone and the sequencing project is available at http://mips.gsf.de/projects/cdna/.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2888 bp mRNA linear HTC 22-SEP-2004
Homo sapiens mRNA; cDNA DKFZp434N0935 (from clone DKFZp434N0935).

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             B 8

Sequence 3799, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTION: BOLYMORPHISMS IN KNOWN GENES ASSOCIATED TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-20

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR PRILING DATE: 2000-10-3

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FASTSEQ FOR Windows Version 4.0

CORGANISM: Human

; Sequence 27, Application
; Patent No. 6800483
; GENERAL INFORMATION:
                               APPLICANT: Danks, Mary K.
APPLICANT: Danks, Mary K.
APPLICANT: Houghton, Peter J.
TITLE OF INVENTION: Compositions and Metl
TITLE OF INVENTION: Tumor Cells
FILE REFERENCE: SJ-0005
CURRENT APPLICATION NUMBER: US/09/595,68:
CURRENT FILING DATE: 2000-01-16
PRIOR APPLICATION NUMBER: 60/075,258
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1696
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1576
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1636
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1636
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1516

Sequence 3, Application US/09264737A

Patent No. 6107549

GENERAL INFORMATION:

APPLICANT: Peng, Paul C.C.

APPLICANT: Ruff, Thomas G.

ITILE OF INVENTION: Engineering Plant Resistance to Pyri

ITILE OF INVENTION: Expression of Esterase Enzymes

PILE REFERENCE: 38-21(10551) RLE3 Pyridine Tolerance

CURRENT APPLICATION NUMBER: US/09/264,737A

CURRENT PILING DATE: 1999-03-09

EARLIER APPLICATION NUMBER: 60/077,377

EARLIER APPLICATION NUMBER: 50/077,377

EARLIER FILING DATE: 1998-03-10

NUMBER OF SEQ ID NOS: 11

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 3

LENGTH: 1701

TYPE: DNA

ORGANISM: Rabbit

Carboxylesterase; enzyme; human; analgesic; nootropic; antiinflammatory; diagnosis; therapy. 27-JUN-2002. Region Protein Homo sapiens. Human carboxylesterase family member 53010. 23-SEP-2002 ABB79537 standard; protein; 18-DEC-2001; 2001WO-US049075. Active-site Domain ABB79537; WO200250256-A2. Peptide (first entry) /note= "p 219. .234 Location/Qualifiers note= label = Mature_protein label= Signal_peptide .545 . 135 "predicted carboxylesterase type-B signature" "carboxylesterase "predicted carboxylesterase type-B serine active 581 8 domain"

                                                                                                                                                                                                                                                                                                                                                  The present sequence is the protein sequence of human 53010, a novel CC protein containing the structural characteristics of a carboxylesterase CC family member. The invention provides 53010 nucleic acids, antisense CC molecules, expression vectors, host cells, transgenic animals, 53010 CC proteins, fusion proteins, antigenic peptides, anti-53010 antibodies and CC methods for detecting the presence of 53010 polypeptides or nucleic ccids, of identifying a compound that binds to the 53010 polypeptide, and CC includic acids can act as novel diagnostic and therapeutic agents for controlling disorders involving aberrant or deficient hydrolysis of CC carboxylic esters. As 53010 mand its expression is regulated in some rodent CC pain models, 53010 molecules can also act as novel diagnostic targets and CC pain models, 53010 molecules can also act as novel diagnostic targets and CC carboxylic esters. As 53010 molecules can also act as novel diagnostic targets and CC pain models, 53010 molecules can also act as novel diagnostic targets and CC especially a pain-related disorders (alsorders) characterised by aberrant activity of a 53010-expressing cell involves administering a compound that compound that sex pression is required activity of a soul activity or expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           surrogate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         18-DEC-2000; 2000US-0256369P.

The present invention describes the use of polypeptides related to urological disorders for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Also described: (1) method for identifying a compound capable of treating a urological disorder; (2) a method for identifying a subject having a urological
                                                                        Use of polypeptides related to urological disorders, e.g. 44330, 54211 or for identifying a compound capable of treating a urological disorder or identifying and treating a subject having a urological disorder.
                                                                                                                                                                                                                                                                                                                         urological disorder; uropathic; cytostatic; urinary incontinence; benign prostatic hyperplasia; human.
                                                          Claim
                                                                                                                                                                                                                                                             14-JAN-2004;
                                                                                                                                                                                                                                                                                                          Homo sapiens

The compound has uropathic and cytostatic activities. The polypeptides related to urological disorders are useful for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Disorders include urinary incontinence and benign prostatic hyperplasia. The present sequence represents a human urological disorder related protein, which is used in the exemplification of the present

The invention relates to an isolated polypeptide with signal sequences contivity of polypeptides of the invention may be described as, cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, cardiant, antipleer, virucide, antithyroid, cerebroprotective, immunosuppressive, haemostatic, antipalamatory, can detabolic. Polypeptides and polymucleotides of the invention are cuseful in the treatment, or as a vaccine in the prevention of, cancer, commund healing disorders, infection, atherosclerosis, Parkinson's disease and allehemetion, heapplastic disease, autoimmune disorder, heamatopoletic disorder, and allehemetion, neoplastic diseases, nervous system related disorders and cardiovascular disorders, pancreatitis, respiratory disorder, cardiovascular disorders, pancreatitis, respiratory disorder, propositieration, systemic autoimmune disease, hyper-immunity, confidence and diseases, metabolic diseases, sperm dysfunction, thyroid disorders e.g. hypothyroidism, brain damages, colitis, cone photocondition, deficiency, neurological diseases, stroke, angiogenesis,
